

# PMR-WEB Radio Management Messaging & Location System

**A new software application designed to give advanced functionality for the management process of radio communications systems**

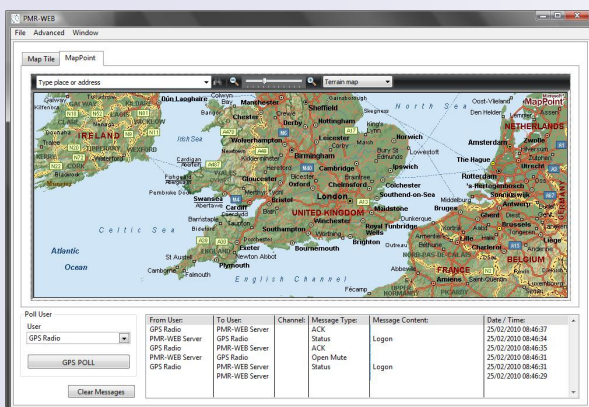

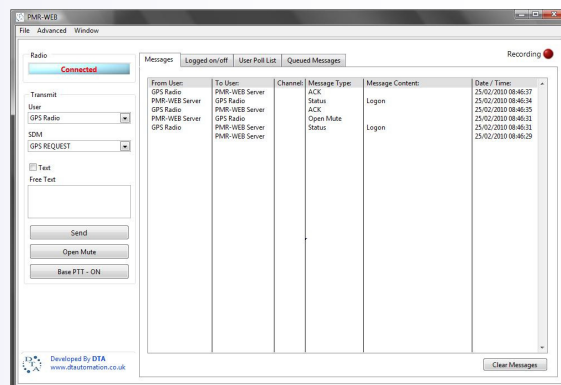

PMR-WEB is currently designed to operate with Kenwood & Icom analogue and digital products (other manufactures equipment may be added in the future subject to sufficient requirements)

Standard features include

- Logging of all radio transmissions
- Lone worker & man-down call process with individual programmable timers
- Emergency call feature
- Redistribution of user data any status function
- Individual or group messaging with queue facility
- Searchable database function for analysis of any system event

## Optional modules

- Voice recording
- GSM Message Forwarding
- RS232 alarm panel interface
- Remote Access
- Advanced remote with VOIP Interface
- Statistical analysis reporting

## Location map

PMR-WEB is supplied as standard with full mapping facilities. It can operate with the "Microsoft Map Point" program ( available separately from Microsoft distribution centres) or with a "map tile" image, or as often required in some situations - both options at the same time. This allows the wide area use of the Map Point product with the specific site use of a custom location map, geo-referencing is included in the program. Radio equipment will require a suitable GPS interface for transmission of position data.
